Hello,

I am a 3rd year international student at NHL Stenden Hogeschool studying IT Software Engineering looking for a possible internship starting August or September for the duration of approximately 6 months in the Netherlands.

I have attached my CV that shows my track record and results for my last 8 years of study in the Information Technology space. It also shows my proficient programming languages such as PHP, Java, Javascript, SQL, HTML5/CSS, C#, ROS and Laravel to name a few. My LinkedIn and CV also contain more languages and tools that I am versed in. I am also skilled in working in a development team with Agile and Scrum principles majorly as the scrum master, an outstanding team worker with excellent communication skills which I hope to improve by working in your company.

After researching different companies, I have chosen yours due to the fact that the specifications that were stated in the application, are the ones which I have done throughout my educational years. In my opinion, I do fit the job perfectly as I have studied diligently over the years.

I hope the information provided above can substantiate my work experience and education level. I yearn for a response from your company and can be reached via my email or phone number
